## Life Cycle of a Moss

### Steps of the moss life cycle:

- ① The Gametophyte is the haploid (n) part of the moss life cycle.
  - Contains ANTHERIDIUM (produces sperm)
  - Contain ARCHEGONIUM (produces egg).
- ② The sperm meets the egg to produce a zygote (2n).
- ③ The zygote develops into the sporophyte (2n)
- ④ Spores are produced from the sporophyte capsule.
  - The spore are haploid (n).
- ⑤ The spores germinate to form gametophytes (n)
